1. Introduction

1.1. Introduction to our project

The course assignment demands construction of a practical website through web technology implementation where HTML and CSS and JavaScript form the foundation to establish an e-commerce watch selling platform. Technological time-measuring devices transformed their original utilization into stylish products used for personal self-expression. Each of our timepieces falls within classic traditional designs or modern contemporary designs. The watch constructions combine leather with stainless steel metal as well as titanium elements combined with glass boundaries featuring plastic components. Our watches blend modern styles with sports details along with high reliability and they also include classic designs that have retro elements built in. Our products look modern but preserve construction methods that are essentially traditional. Over time our watches have kept their fashionable appeal while continuously maintaining style popularity.

An exact combination of sports elements and modern design allows our watches to create harmonious aesthetics between current looks and excitement for active lifestyles. The genuine traditional building methods which create our products protect the exceptional workmanship and maintain premium product quality while delivering fashionable looks. Our watches maintain their fashionable appeal through all fashion shifts that took place during the years. A classic quality in our timepieces also attracts fashion-orientated users alongside style-savvy consumers because it confirms the everlasting value of their design.

1.2. Goals and Objectives

This project work tests or help us our ability to apply what we learned our concept and skills in class to real-life situations. Its goal and might be different learning objectives. Here are some common objectives and goal that we worked for:

- To give a practical build a working website using HTML, CSS and JavaScript.
- To get official concepts, understand the basic rules and structure of HTML, CSS and JavaScript.
- To survey we used various CSS to make websites attractive and look good.
- To make it sure the website works well or great on different devices or make their design or screen sizes.
- To enhance the website with various interactive elements using JS.
- To use JavaScript to make the website different or attractive with dynamic.
- To organize well practice keeping your project neat and organized.
- To learn how to debug or troubleshooting, learning how to fix errors or queries and solve problems that come up while building the website.

The main goal of building this website is to show how to work with HTML, CSS and JavaScript. It is to get hands on experience, understand these technologies better work, leaning how to create attractive and functional web pages with us.

1.3. Use of HTML, CSS while developing website

i. HTML

Figure 1: Logo of HTML

HTML represents Hyper Text Markup Language as its core function to develop web pages however it remains the basic markup standard for webpage development. Web development requires HTML because the language establishes the basic structure of webpages. The browser uses tags to understand instructions that determine content presentation.

Some of the html tags we used in our project are:

<!DOCTYPE>: it defines the type of document.

<html>: defines an HTML document

<head>: contains metadata /information for the document

<meta>: defines metadata about an HTML document

<title>: defines title for the document

<body>: defines the document's body

<h1>to<h6>: defines HTML headings

<form>: defines an HTML form for user input

<p>: defines a paragraph

: inserts a single line break
<!--...-->: defines a comment
<input>: defines an input control
<text area>: defines an multiline input control
<button>: defines a clickable button
: defines an image

```
<html lang="en">
  <head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Watch</title>
    <!-- <link rel="stylesheet" href="style.css" -->
    <link rel="icon" type="image/x-icon" href="/">
    <link rel="icon" type="image/x-icon" href="assets/img/favicon.ico">
    <link rel="stylesheet" href="../css/slider.css">
    <link rel="stylesheet" href="../css/footer.css">
    <link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/remixicon/3.5.0/remixicon.css">
    <link rel="stylesheet" href="../css/index.css">
    <script src="https://kit.fontawesome.com/8b0ab91d70.js" crossorigin="anonymous"></script>
  </head>

  <body>
    <!-- navbar -->
    <header class="navbar">
      
      <nav>
        <ul class="links">
          <li><a href="AboutUs.html">About Us</a></li>
          <li><a href="contactus.html">Contact Us</a></li>
          <li><a href="products.html">Product Page</a></li>
          <li><a href="blogpage.html">Blog</a></li>
          <li><a href="Research.html">Research</a></li>
        </ul>
      </nav>
      <div>
        <a href="login.html"><i class="fa-regular fa-user"></i></a>
        <a href="addtocard.html"><i class="fa-solid fa-cart-shopping"></i></a>
      </div>
    </header>
```

Figure 2: Used HTML tags

In the above image we used
tags

<div> to manage the relative contain with in same container.

<meta> define the helps organize, identify, and access data.

<image> is used to put image in webpage.

```
<form onsubmit="validation(event)">
```

Figure 3: Form tag used

<form> is used in contactpage.html to submit all information at once.

attributes

Href to link pages

Src for path of contain

```
<!--next prev button-->
```

Figure 4: Example of comment

Comment is to identify the codes and understand easily.

ii. CSS

Figure 5: Logo of CSS

Online documents benefit from style functions through the simple CSS mechanism that controls elements such as fonts and colors and spacing. Bos (2023) explains CSS functions as an inline process and two other methods: internal and external concepts.

- **Inline CSS**

Through Inline CSS users can embed CSS styling information directly into an HTML tag through the web page which permits them to fashion a single element directly from its source. A difference exists between referring to external style sheets and using `<style>` blocks in `<head>` elements and enclosing CSS rules inside specific HTML elements.

```
<h2 style="color: #rgb(9, 2, 2); text-align: left;">Impact of Technology on Watch History</h2>
```

Figure 6: Used inline CSS

- Internal CSS

The embedding of CSS rules in the HTML document head section under a `<style>` tag makes up the fundamental aspect of internal CSS style implementations. A web page developer can style multiple elements without needing to use an external style sheet because of this capability. CSS code written internally is placed inside a `<style>` tag within the `<head>` part of your webpage.

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Blog page</title>
    <link rel="stylesheet" href="../css/blogpage.css">
    <link rel="stylesheet" href="../css/index.css">
    <script src="https://kit.fontawesome.com/8b0ab91d70.js" crossorigin="anonymous"></script>

    <style>
        * {
            margin: 0;
            padding: 0;
            box-sizing: border-box;
            font-family: Arial, sans-serif;
        }

        .hero {
            width: 100%;
            height: 400px;
            background-image: url('../img/bgimg1copy.webp');
            position: absolute;
            background-size: cover;
            background-position: center;
            padding-right: 10%;
            align-items: center;
            color: #ebe0e0;
            text-shadow: 2px 2px 4px #rgba(237, 39, 39, 0.5);
            top: 0;
        }
    </style>

```

Figure 7: Used internal CSS

- External CSS

External CSS files are used to add styles to your HTML page by referring to a stylesheet file external to it. Rather than placing your CSS code inside the HTML document, you save it in a separate file with an extension. CSS and link it inside your document with the `<link>` tag in the `<head>` section

```
.box1{
    height: 200px;
    text-align: center;
    margin:20px 0px 15px 100px;
    padding:10px 10px;
    border:12px solid □rgb(0, 0, 0);

}
.box2{
    height:200px;
    text-align: center;
    margin:15px 0px 60px 100px;
    padding: 10px 10px;
    border:12px solid □rgb(0, 0, 0);
}

form{
    height:400px;
    margin: 20px 20px;
    padding:45px 20px;
    border: 2px outset □rgb(188, 187, 187);

}

input[type="text"],input[type="tel"],input[type="email"]{
    width:80%;
    height:25%;
    margin: 10px 0px;
}
```

Figure 8: Used external CSS

iii. JavaScript

Website interactivity emerges from JavaScript because this tool serves as an advanced programming language that allows pages to interact dynamically. Web page interaction features form the core elements of World Wide Web technologies with an execution level matching that of both HTML and CSS functions. External computing devices remain separate from the execution of JavaScript programs by browser systems. The main responsibility for pre-modern technology web browsers was executing JavaScript code.

The dynamic outputs of JavaScript contain various functional elements.

- Interactive Elements: Buttons, sliders, menus, and other user interface components. The combination between Visual Signals and Animated Transitions generates Hard-to-Miss Visuals which constitute part of Design elements. The system retrieves server data in addition to storage data as its first step before starting its processing tasks.
- User Interactions: Reacting to user events such as clicks, hover, and form submissions. Part of HTML files include the script tag which contains JavaScript code to enable incorporation functions.

The browser program JavaScript engines automatically launch execution after page loading ends. When executing its processing duties JavaScript controls the DOM structure containing objects to modify document HTML content.

1.4. Verdict

The HTML tags provide organizational principles that help webpage content display in appropriate order. Among HTML tags there exist principal categories that include heads along with whirls and dividers followed by structural elements and navigation links () and multimedia components (, ,) and interactive form items ().

The element generates a form that enables users to provide data through diverse text inputs as well as selectable choices together with clickable buttons. Web content definition benefits from the four elements of semantic tagging in HTML5 which include and among

elements.

2. Discussion and Analysis

2.1 Selected Text Editor: Visual Studio Code (VSC)

Figure 9: Logo of VS code

Visual Studio Code, or more commonly known as VS Code, is a free to use open-source software engineering tool by Microsoft that is available for users of the Windows, Linux or macOS operating systems. It enables users to write, edit or even debug code given in multiple programming languages.

By unison of VS Code, we indulge in the following benefits when dealing HTML, CSS and JavaScript:

- Highly Functional: VS Code is very simple yet very powerful source code editor as it can run on lower resource infrastructure smoothly without consuming much

resources, hence making it possible to have smooth input experience without any lags.

- Writing and Code Debugging: The software contains many features that ease the writing process such as autocorrection, auto-completion code snippets and helps if any fault is present in terms of writing codes.
- Live Preview: The tool itself contains some advanced technology which helps the software to present all the changes which were made throughout the development process of the website
- Integrated Terminal: It is basically an inbuilt terminal integrated already in the editor so developers do not have to keep on switching the software's while performing operations.
- Cross-Platform Compatibility: This software works perfectly fine on all three surfaces which are available for use, namely: Mac OS, Windows, Linux - so if a developer needs to work on another device they can easily do so without any hassle.

2.2 Tools used while developing wireframe: Balsamiq

Figure 10: Logo of Balsamiq

Balsamiq is used for a fantastic tool for creating wireframes. it is used for quick access for a sketch and communication their ideas for web and mobile applications, just like for a rough construction of a website pages with intricate design in details. The uses of balsamiq with their different and variety of tools for creating interactive prototype by connecting screens with user ideas or interaction. There is the advantage of using balsamiq wireframes is it helps to improve the functionality and developers focus for the website ideas. Through this way, they can share or validate the visual idea or design as well concepts with us, by using balsamiq wireframes for the creation of own perspective.

2.3 Tools used while developing logo: Logo Maker

Figure 11: Logo of Logo maker

Users can effortlessly design through Logo maker by using drop functions that let them move interface elements. This program enables users of all backgrounds to create outcomes successfully which was our starting point to build an initial guide for user journey from start to finish result. Some features are:-

- Clean Visual Hierarchy

The application needs to provide features which users can easily comprehend through readable elements that serve as navigation between its features.

- Engaging Graphics

The application incorporates suitable imagery combined with visual animations that improve the text content while adding visual appeal to it.

- Concise Messaging

Each important feature is described with brief information and optional additional information available upon request.

3. Pages used in our website

3.1. Home Page

i. Description of Home Page:

Website entrance elements acquire analysis on this page regarding how they display brief information in an easy-to-navigate manner for visitors. The initial part of any webpage displays both a business logo and a menu navigation system under the header section. You should focus on the main content section directly upon loading the webpage. The main content of service list and introduction appears prominent immediately after website entry with positive client feedback placed throughout. A webpage footer includes essential legal documents alongside contact information available for visitors. Online page features unite harmoniously to create an easy user experience which stays in users' minds.

ii. Screenshot of Wireframe:

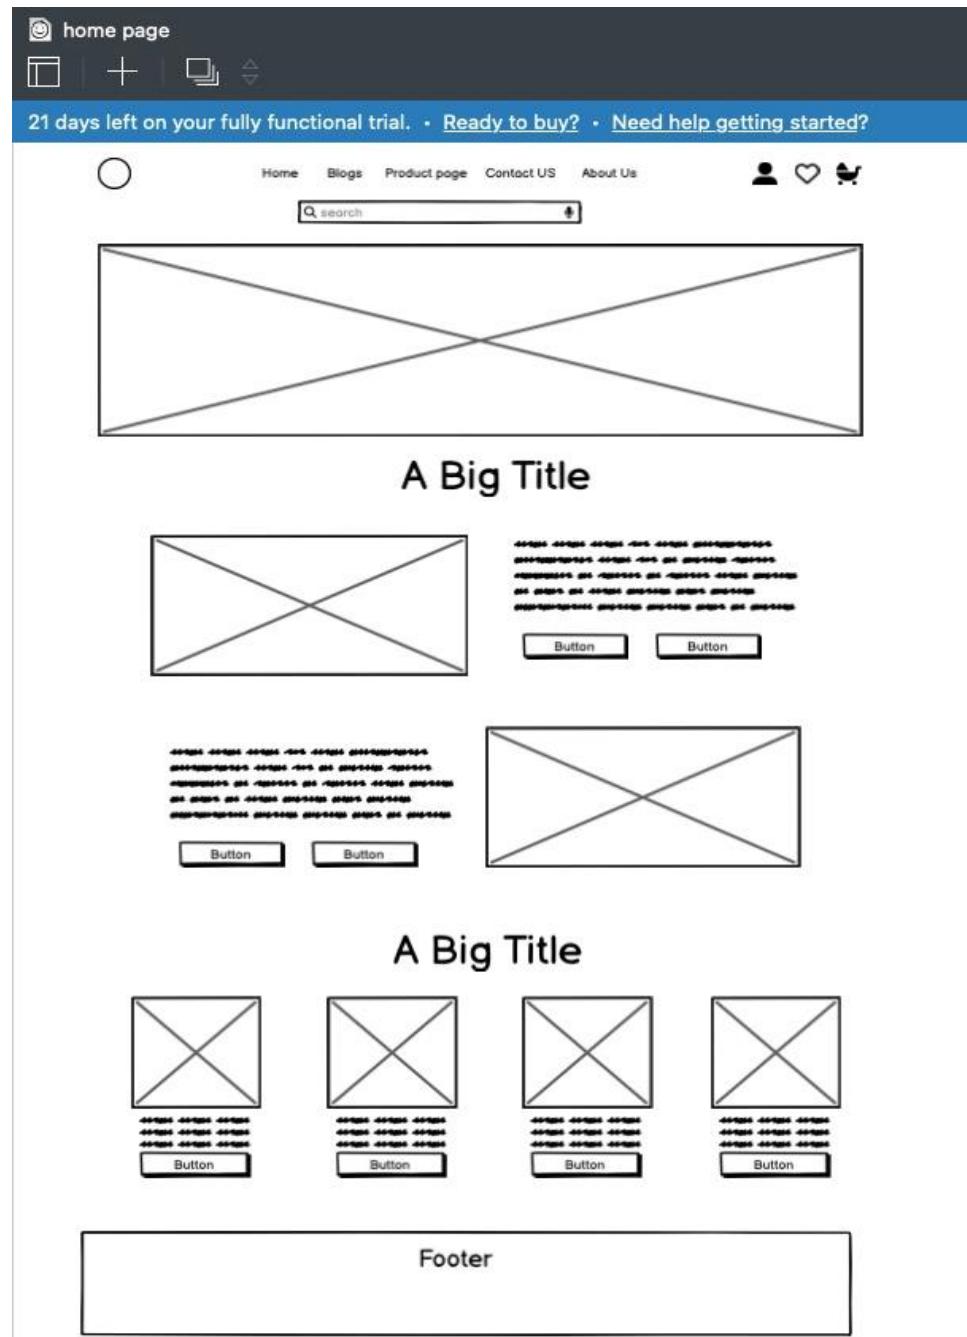

Figure 12: Wireframe of Homepage

iii. Screenshot of Home Page:

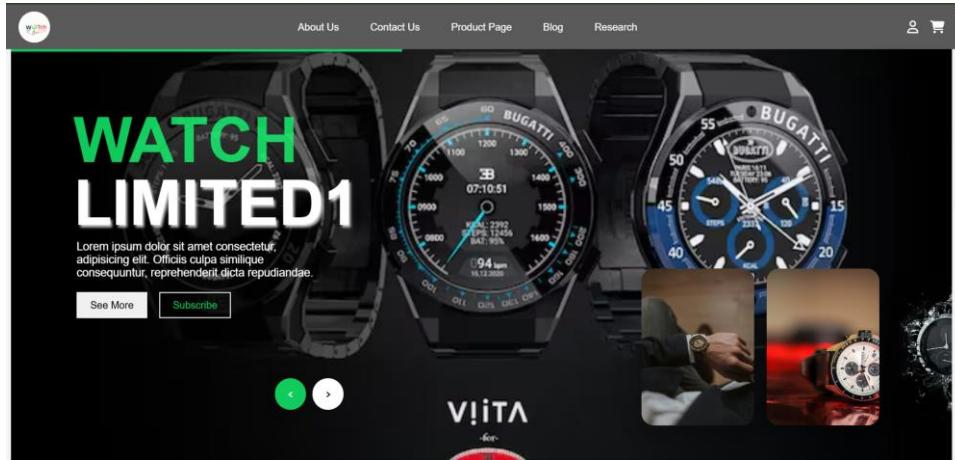

Figure 13: Screenshot of Home Page

3.2. Products Page

i. Description of Products Page:

This webpage includes a message about watch and top selling watches and various watches. Buyers can select the product they want and there is a 'Add to cart' button in our every product available in our website.

ii. Screenshot of Wireframe:

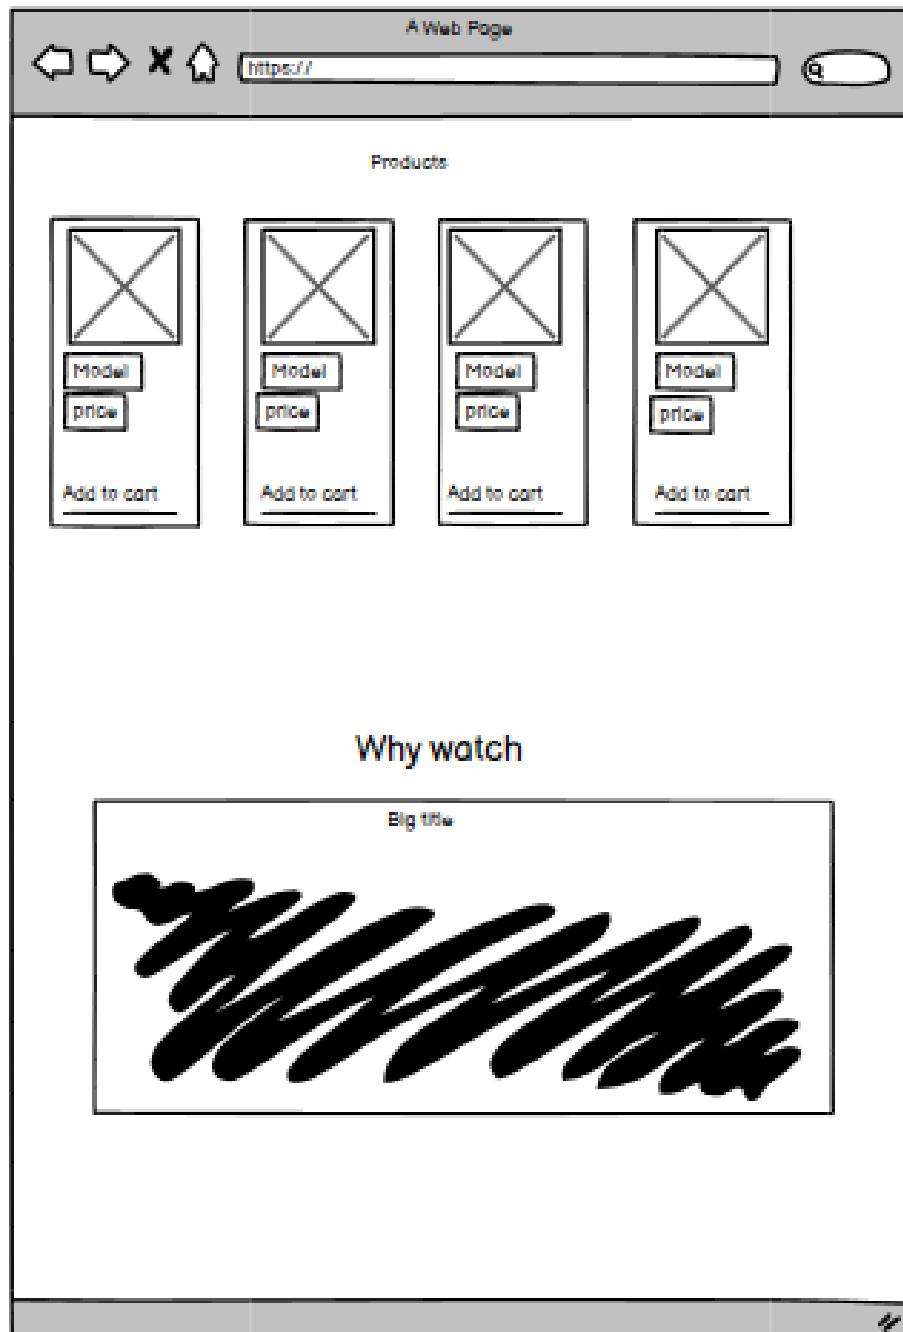

Figure 14: Wireframe of Product page

iii. Screenshot of Product Page:

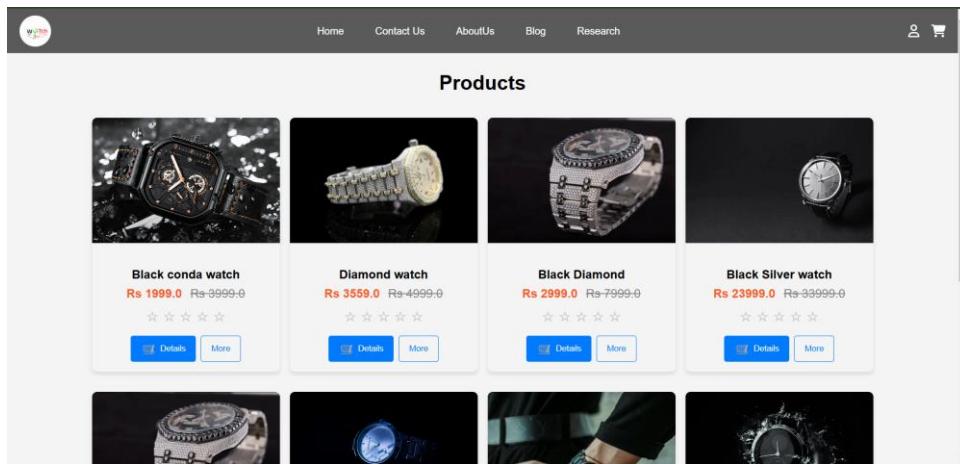

Figure 15: Screenshot of Product page

3.3. Blog Page

i. Description of Blog Page

The webpage explores how technology affected the historical development of the watch industry. This analysis investigates the technological impact on watch historical development by showing the significant changes that watches have experienced. This article examines watch development through technology along with material evolution and smart innovation that reshapes the way watches look and behave. This analysis examines product and sales strategies through the implementation of five technical enhancements in watch design systems that improve product qualities while driving business growth. This research evaluates both positive and negative watch influences through a detailed list of three advantages and three difficulties which recent watch designs present. The blog delivers ongoing industry trend updates accompanied by several developments from the watch market to readers.

ii. Screenshot of Wireframe

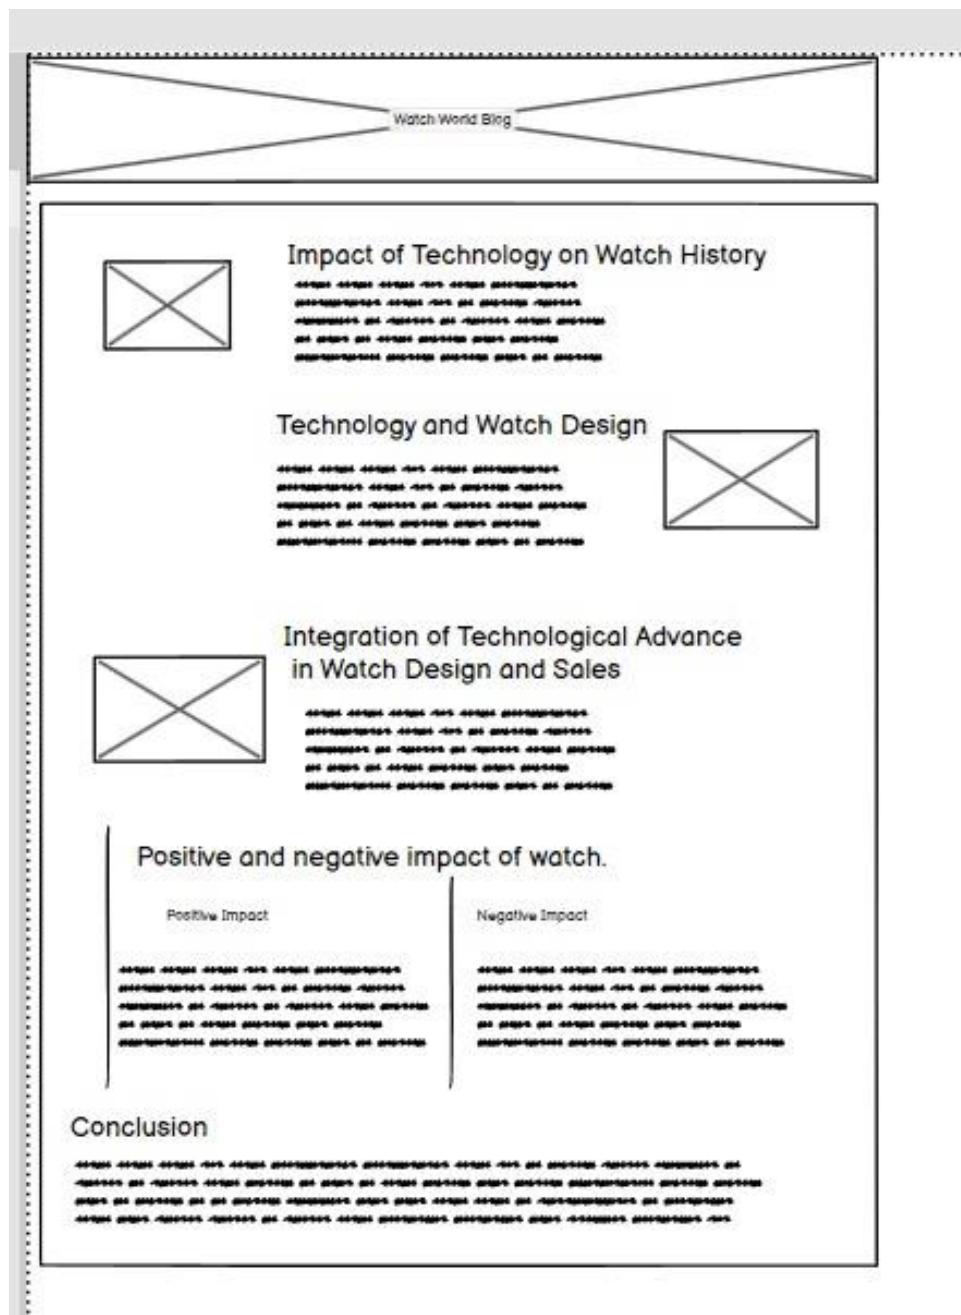

Figure 16: Wireframe of Blog page

iii. Screenshot of webpage

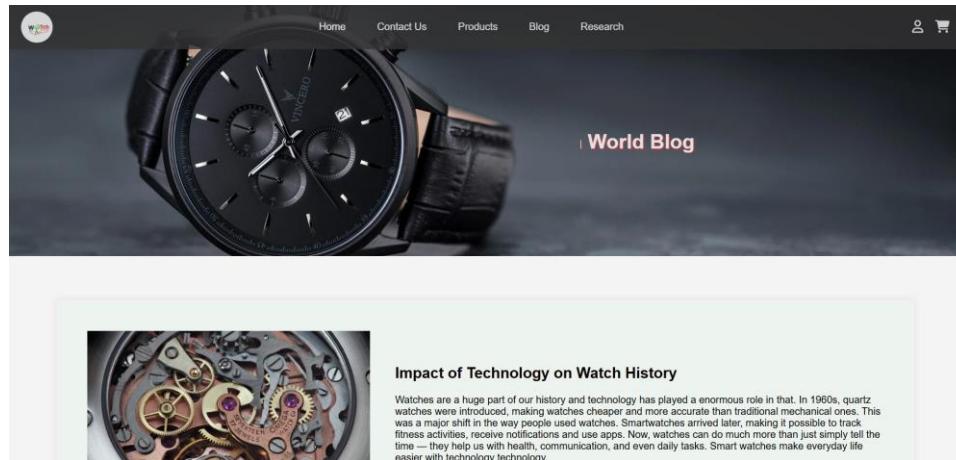

Figure 17: Screenshot of Blog page

3.4. Research Page

i. Description of Research Page

The webpage functions as an all-inclusive center that collects information about ongoing and past research investigations. The web page provides brief summaries that explain the objectives and research methods with main findings and implications of each studied project. The page presents its research team to users and links to official articles accompanied by accessible supplemental materials to support further learning. Research pages play a central role in information aggregation which enables knowledge dissemination between experts and prompts collaborative work while providing up-to-date information about scientific breakthroughs across a selected academic discipline.

ii. Screenshot of wireframe

Figure 18: Wireframe of Research page

iii. Screenshot of Research Page

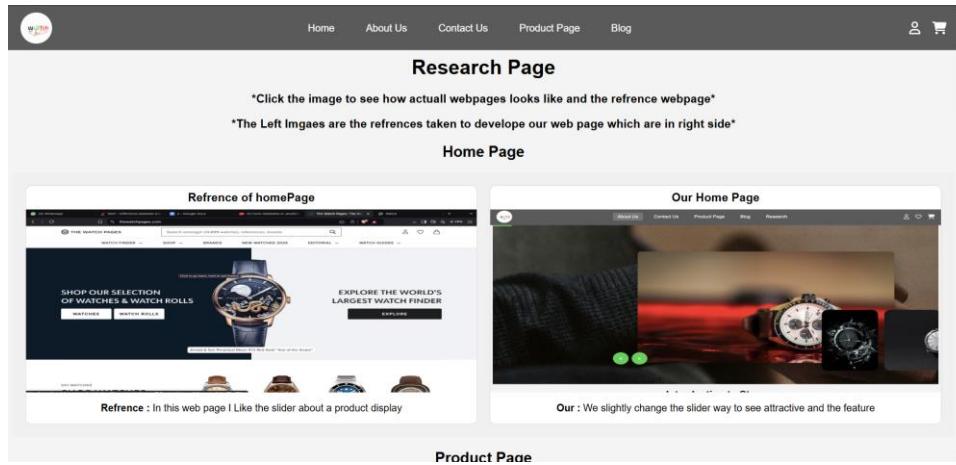

Figure 19: Screenshot of Research page

3.5. About Us Page

i. Description of About Us Page:

The "About Us" section introduces personnel information and focuses on watch accessory products. The "Meet Our Team" section showcases the creative professionals behind our team who brought productive ideas through their hard work to develop this website which displays their creativity throughout. Our website enables customers to find their preferred products and shopping platform through best service alongside premium quality offerings.

ii. Screenshot of Wireframe:

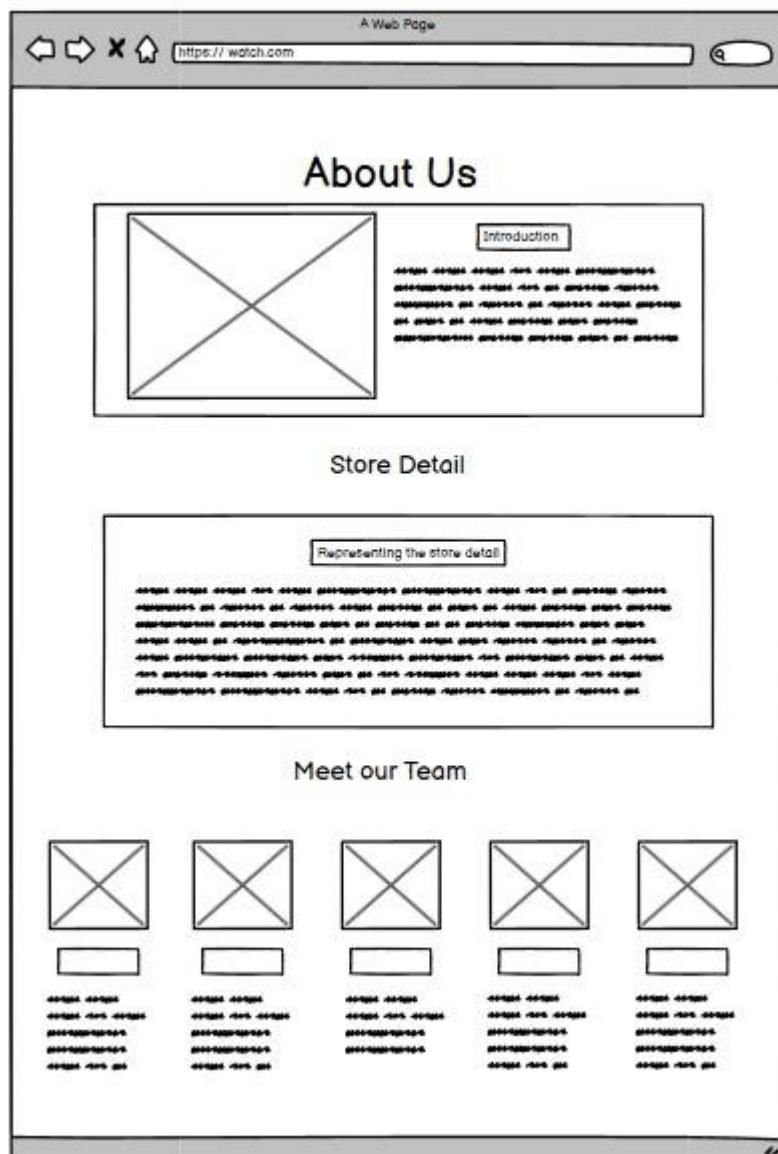

Figure 20: Wireframe of About us page

iii. Screenshot of About US page:

The screenshot shows the 'About Us' page of a website. At the top, there is a navigation bar with links for Home, Contact Us, Products, Blog, and Research. On the right side of the header are user icons for login and a shopping cart. Below the header, there is a large image of a gold-toned wristwatch with a black leather strap. To the right of the image, the title 'About Us' is displayed, followed by a brief company introduction: 'Welcome to our company! We are a team of passionate professionals committed to delivering the best solutions to meet your needs. Our mission is to provide innovative, reliable, and high-quality services to our clients worldwide.' Below this, another paragraph states: 'With years of experience in the industry, we take pride in our ability to adapt, grow, and achieve success in an ever-changing environment. Let's work together to create something exceptional.' A section titled 'Store Details' contains a table with four columns: Store Name, Address, Email, and Contact Number. The data in the table is as follows:

Store Name	Address	Email	Contact Number
Elegant Watches	Naya bajar, pokhara	infowatch@gmail.com	0611234

Below the store details, there is a section titled 'Meet Our Team' which lists five team members with their profiles:

- Siruta Ale**
Role: Frontend developer
Address: NayaBajar, pokhara
Phone: +977 1234567890
Email: Sirutale@gmail.com
- Bipeen Baral**
Role: Web developer, Quality Assurance & Testing
Address: Lekhsaile, pokhara
Phone: +977 1234567890
Email: Bipinbaral@gmail.com
- Sujit Bastola**
Role: Project Manager, Web developer
Address: Nadipur, Pokhara
Phone: +977 1234567890

Figure 21: Screenshot of About US page

4. Testing

Test 1: To check hover effect of CSS on navbar.

Objective Table	To check hover effect of CSS on navbar.
Action	Hovering mouse on the navbar menu items.
Expected Outcome	The background color of navbar menu item should be changed.
Actual Outcome	The background color of navbar menu item changed.
Conclusion	Test successful.

Table 1: Test 1

Navbar without hover :

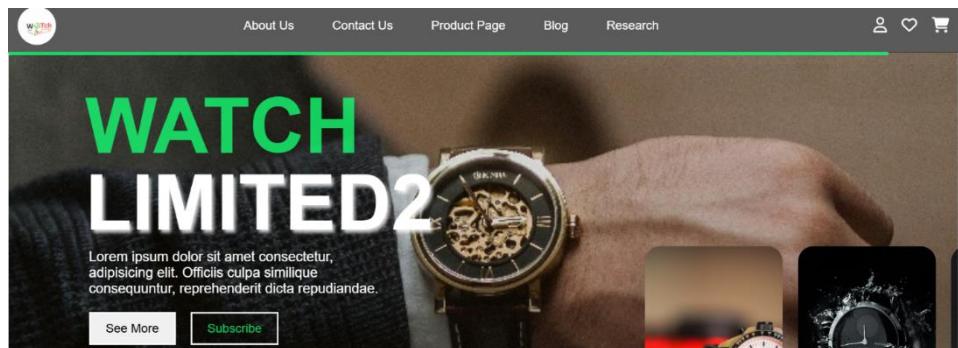

Figure 22: Not hovering in navbar

Navbar with hover:

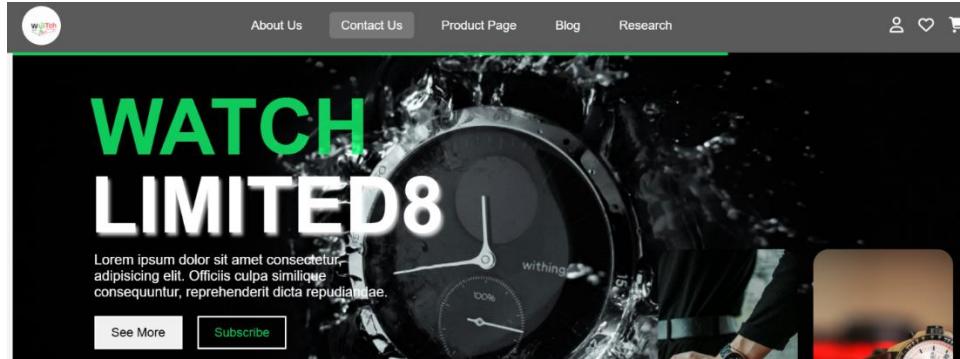

Figure 23: hovering in navbar

Test was successful because of the following CSS code :

```
.list .item:nth-child(2) .content{
    display: block;
}

.content .title{
    font-size: 100px;
    text-transform: uppercase;
    color: #14ff72cb;
    font-weight: bold;
    line-height: 1;

    opacity: 0;
    animation: animate 1s ease-in-out 0.3s 1 forwards;
}

.content .name{
    font-size: 100px;
    text-transform: uppercase;
    font-weight: bold;
    line-height: 1;
    text-shadow: 3px 4px 4px rgba(255, 255, 255, 0.8);

    opacity: 0;
    animation: animate 1s ease-in-out 0.6s 1 forwards;
}

.content .des{
    margin-top: 10px;
    margin-bottom: 20px;
    font-size: 18px;
    margin-left: 5px;

    opacity: 0;
    animation: animate 1s ease-in-out 0.9s 1 forwards;
}
```

Figure 24: CSS code for test 1

Test 2: To check form validation.

Objective Table	To check form validation.
Action	Opening Contact page and filling in or not filling in contact inputs and check what message is shown
Expected Outcome	Empty fields should popup "Mobile number should be in 10 digits and numeric" message and all fields entry should popup "Your Form is submitted sucessfully!".
Actual Outcome	Empty fields showed popup " Mobile number should be in 10 digits and numeric" message and all fields entry showed popup " Your Form is submitted sucessfully!" too.
Conclusion	Test successful.

Table 2: Test 2

Figure 25:Contact form

It returned the following message :

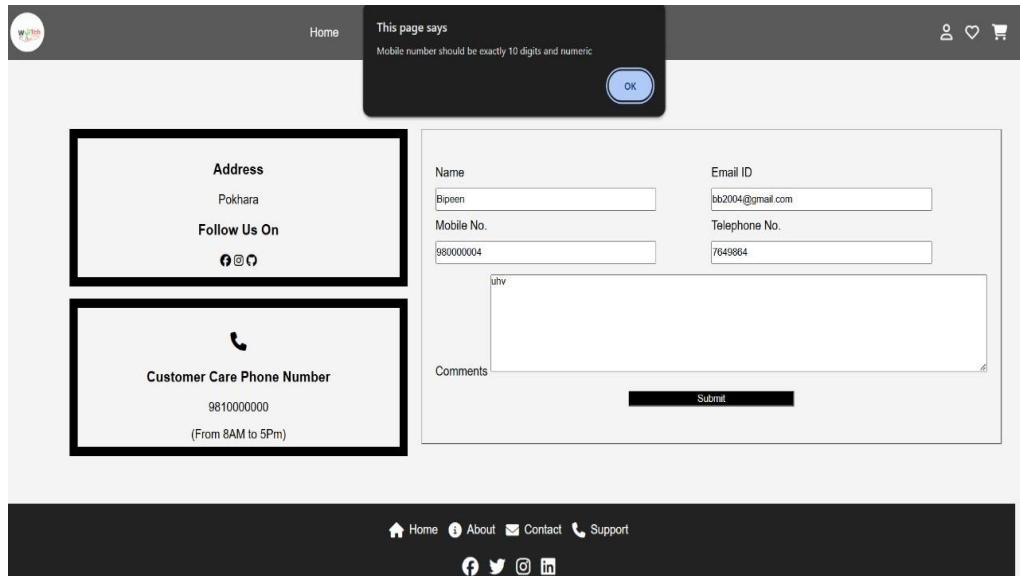

Figure 26: Pop up after wrong values

Now let's try with all values as below:

The screenshot shows a web page with a dark header bar containing a logo, 'Home', and user icons. A central modal window displays a success message: 'This page says' followed by 'Your form is submitted successfully!' with an 'OK' button. Below the modal, there are two main sections: one for address and social media links, and another for contact information and a comment section. The contact section includes fields for Name, Email ID, Mobile No., Telephone No., and Comments. The 'Comments' field contains the text 'uhv'. At the bottom of the page is a dark footer bar with links: Home, About, Contact, Support, and social media icons for Facebook, Twitter, Instagram, and LinkedIn.

Name	Email ID
Bipeen	bz2004@gmail.com

Mobile No.	Telephone No.
9800000042	7649064

Comments
uhv

Figure 27:Pop up with correct values

So the test was successful.

This test is successful because of the following javascript code :

```
<script>
function validation(event) {
    event.preventDefault(); // Prevent form submission

    // Get input values
    var name = document.getElementById("name").value.trim();
    var mobileNo = document.getElementById("mobileNo").value.trim();
    var email = document.getElementById("email").value.trim();
    var telephone = document.getElementById("telephone").value.trim();

    // Validate inputs
    if (name === "" || mobileNo === "" || email === "" || telephone === "" || comments === "") {
        alert("Please fill all the fields");
        return false;
    }
    else if (mobileNo.length !== 10 || isNaN(mobileNo)) {
        alert("Mobile number should be exactly 10 digits and numeric");
        return false;
    }
    else {
        alert("Your form is submitted successfully!");
        window.location.href = "login.html";
        return true;
    }
}

function handleFormSubmit(event) {
    event.preventDefault(); // Prevent default form submission
    // Show confirmation message
    alert("Your form is submitted successfully!");
    // Redirect to the login page
    window.location.href = "../html/index.html";
}
</script>
```

Figure 28: CSS code for test 2

Test 3: To check hover effect of CSS on Page topic.

Objective Table	To check hover effect of CSS on Page topic.
Action	Hovering text animation on the blog page.
Expected Outcome	The background text of blog page should be animated.
Actual Outcome	The background text of blog page is animated.
Conclusion	Test successful.

Table 3: Test 3

Figure 29: Without hover in text

Figure 30: With hover in text

Test was successful because of the following CSS code :

```
<div class="hero">
  <h1>
    <marquee direction="left">Watch World Blog</marquee>
  </h1>
</div>
```

Figure 31: CSS code for test 3

Test 4: To check for internal and external links.

Objective Table	To check for internal and external links.
Action	Click on href tag of navbar to go to internal links , click on href tag of Footer's socials to go to external links.
Expected Outcome	We should be redirected without any problems.
Actual Outcome	We are redirected .
Conclusion	Test successful.

Table 4: Test 4

Internal links are hyperlinks that direct the readers to a targeted page on your website. Internal link is a link from one page to another on the same domain.

External links are that which wants customers clicking on links that directs them away from your website.

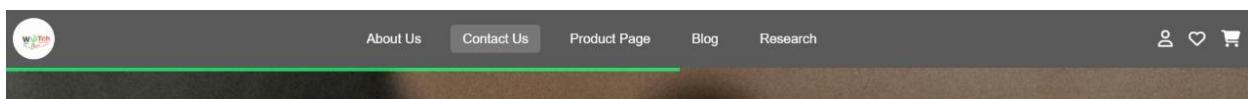

Clicking on internal link:

Figure 32: Clicking on internal link

We are redirected to the internal link :

Figure 33: Successful internal link

Now let's test the external links of references :

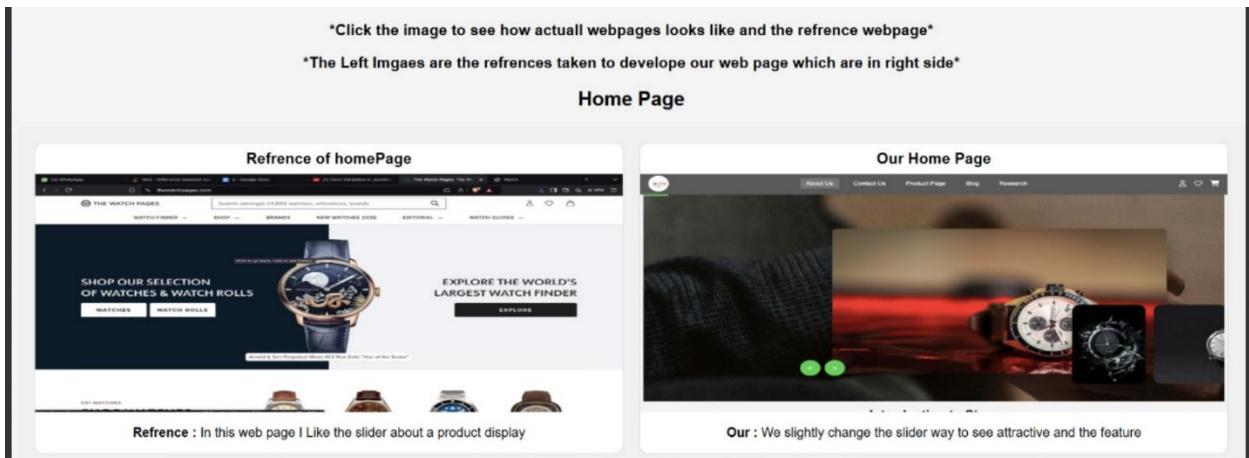

Figure 34: Clicking on external link

We are redirected to that external link :

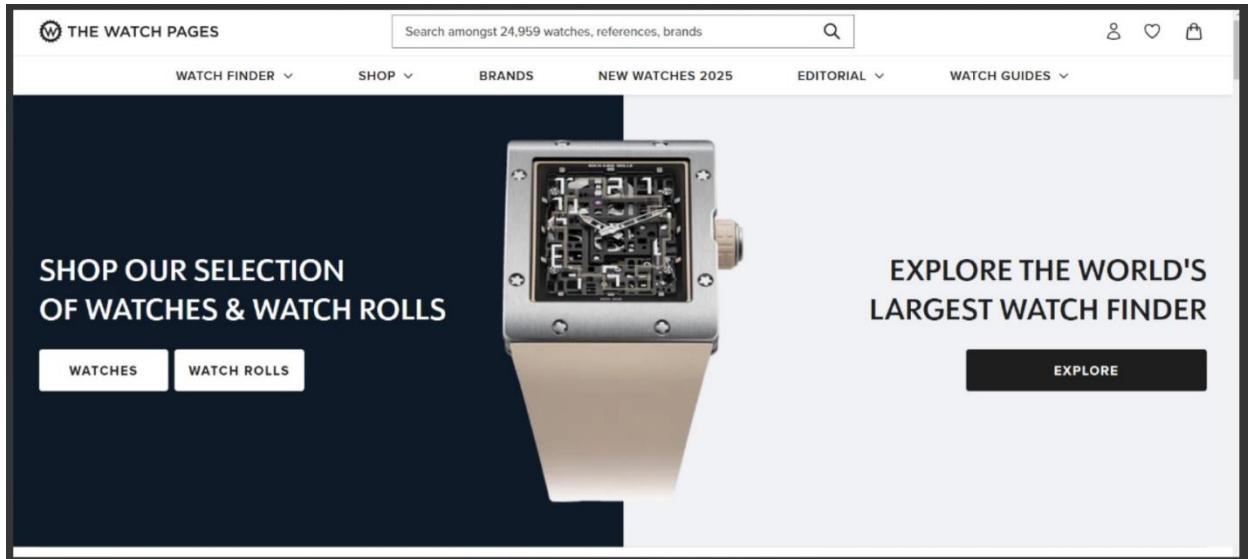

Figure 35: Successful external link

Test 5: To check image slider.

Objective Table	To check image slider and functionality.
Action	Click on home page and click on image slider button.
Expected Outcome	Image should be slide left and right, and text animation with proper height width.
Actual Outcome	Image is滑ed left and right, and text animation with proper height width.
Conclusion	Test successful.

Table 5: Test 5

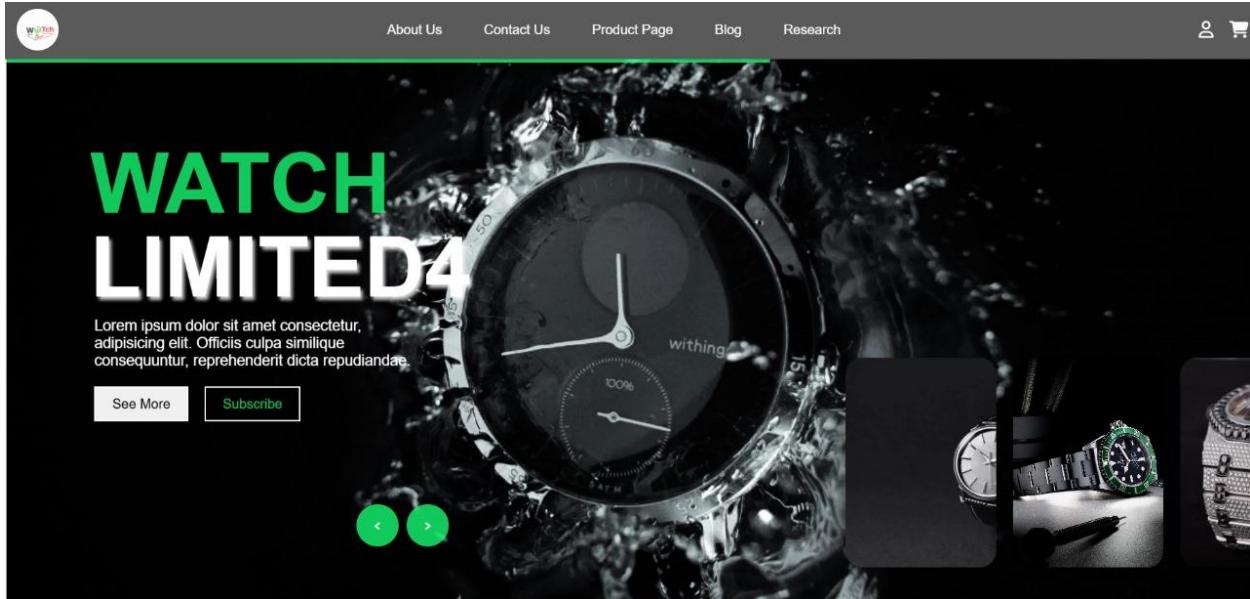

Without clicking button:

Figure 36: Without image slider

With clicking button:

Figure 37: With image slider

Test was successful because of the following CSS code :

```
.carousel{

Figure 38: CSS code for test 5

5. Conclusion

Working on this project with HTML and CSS and JavaScript enabled us to gain substantial knowledge about our watch shopping website as we developed while facing many obstacles. The first genuine website development experience came to us in our beginner level. We initially found the starting place confusing since we lacked guidance until our cooperative team members and our head of the team provided helpful directions to experience extensive resources including web-based information. The training included teaching us to generate wireframes and find ways to back the website design. Every piece of theoretical knowledge obtained from sources became practical when applied to real-life situations. The main difficulty revolved around implementing all programmed languages to build a watch website connecting internal programming with external CSS integration for the website. The project's completion date along with its final update caused our team significant concern but we managed to finish it together. The project turned out to be an interesting way to practice our skills.

Construction of the watch shopping website enhanced our operational competencies while strengthening our ability to resolve problems. Every obstacle became an educational experience through which we learned different abilities because the situation changed rapidly. Our constant dedication along with our strong determination enabled us to handle obstacles so we could fulfill our goals. The development process has proven to us that our acquired skills function as essential resources for progressing in new future activities. Teamwork proved its strength through our project involvement which confirmed that learning continuously and challenging boundaries leads to successful results. Our experience has made web development innovation and new challenges seem concrete because we developed confidence along with enhanced abilities.

<div class="impact">
    <h2 style="color:rgb(9, 2, 2);text-align:left;">Impact of Technology on
    Watch History</h2>

    <p>Watches are a huge part of our history and technology has played
    a enormous role in that. In
        1960s,
            quartz watches were introduced, making watches cheaper and
            more accurate than traditional
                mechanical ones. This was a major shift in the way people used
                watches. Smartwatches arrived
                    later, making it possible to track fitness activities, receive
                    notifications and use apps.
                Now, watches can do much more than just simply tell the time —
                they help us with health,
                    communication, and even daily tasks. Smart watches make
                    everyday life easier with technology
                        technology.</p>

    </div>

</div>
<div>
    <div class="section-impact" style="display:flex; align-items: center;">

        <div class="impact">
            <h2 style="color:black;text-align:left;">Technology and Watch
            Design</h2>

            <p>Technology has also greatly influenced watch design. In past,
            watches came in simple, classic styles with metal and leather.
            With
                With new technology, it is also seen that designs are more
                modern and creative. Smartwatches
                    now have
                        dashing touchscreens, custom-made watch faces and thin,
                        featherlight materials. Advanced
                            with materials such as titanium, ceramics and sapphire glass
                            make watches more durable and
                                more
                                    stylish. Technology is capable of anything from jackets to all-new
                                    retro
    
```

designs so that people have plenty of options that will fit their style and needs.</p>

        <div class="impact">
            <h2 style="color:black;text-align:left;">Integration of Technological Advancements in Watch Design and Sales</h2>
        </div>
    </div>
<p>Watch design and sales have been transformed by technology. Modern watches feature smart functionality such as fitness tracking, notifications, and GPS, combining form with function. Examples of advanced materials include titanium and ceramic build better, sturdier, more fashionable timepieces. In e-commerce, online shopping, virtual try-ons, and social media marketing made it easier for brands to connect with customers worldwide. This tech integration enables watch companies to design innovative products and reach a broader audience more effectively.</p>

<div class="section">
    <h2 style="text-align:center;"> Positive and negative impact of
watch.</h2>
    <div class="impact-grid">
        <div class="impact-box">
            <h3>Positive Impact</h3>
            <ul>

                <li> Better Features: Smartwatches have great features such
as fitness trackers, GPS,
                    notifications, etc. </li>
                <li> Better Time keeping: Technology helps improve better
accuracy with watches.</li>

                <li> Connectivity: Smartwatches connect to your phone,
making things more convenient.
                    </li>
                <li> New Designs: Technology enables new fashionable
styles for watches </li>
            </ul>

        </div>
        <div class="impact-box">
            <h3>Negative Impact</h3>
            <ul>

                <li> Quickly Outdated: New tech can render older watches
obsolete quickly..</li>
                <li> Complexity: Watches with improvement features might
be more difficult to use for
                    aged generations.</li>
                <li> Expensive: Tech features can drive up the price of a
watch, and most people
                    can't afford high price. </li>
                <li> Battery Life: Smartwatches usually have to be charged
more frequently.</li>

            </ul>

        </div>

    </div>
```

```
</div>
</div>

<div class="section">

    <h2 style="text-align:left ;padding-top: 50px;"> The conclusion:</h2>
    <p>
        In the watch industry, we've seen significant transformations when
        it comes to the integration
        of technology.
        Watches have gone from being mere time-telling devices to highly
        functional daily wear items
        thanks to smart features as well as designs.
        This transition also shows that the watch industry can find a way to
        stay creative and fresh
        outside of its historical context by adapting watches to modern
        standards and desires.
    </p>
